

Hao-min Cheng was graduated from Faculty of Medicine, National Yang-Ming University, Taipei, Taiwan with the outstanding award among Graduate. He also holds a doctorate degree in Medicine from University of Adelaide, Australia. He has been a cardiologist for more than 15 years with the sub-speciality of interventional cardiology and echocardiography. As an professor in National Yang-Ming University, he has been granted the awards of excellence in Clinical and Internship Teaching numerous times. He is currently the director of Centre for Evidence-based Medicine in Taipei Veterans General Hospital, and his research has been focusing on cardiovascular hemodynamics, hypertension management, and evidence-based health care with more than 200 articles published in peer-reviewed journals and several patents in US, Japan, and Taiwan. Meanwhile, he is an editor in BMC cardiovascular disorders and JBI evidence synthesis and has been involved in editorial and peer-review work of many international SCI listed journals. To achieve the goal of evidence-based health care, he has developed the innovative techniques relating to cardiovascular hemodynamics and endeavoured to facilitate the technology transfer from research to industrialisation.
